

## Abortion Statistics

### Current United States Data

- Total number of abortions in the U.S. 1973-2018: 61.8 million+
- 186 abortions per 1,000 live births (according to the Centers for Disease Control)
- U.S. Abortions in 2017: ~862,320 (Guttmacher Institute)
- Abortions per day: 2362+ (GI)
- Abortions per hour: 98+ (GI)
- 1 abortion every 96 seconds (GI)
- 13.5 abortions / 1000 women aged 15-44 in 2017 (GI)

These statistics include only surgical and medical abortions. Because many contraceptive measures are abortifacients (drugs that induce or cause abortions), this statistics do not reflect the number of children killed by chemical abortions.

When conducting research on abortion statistics, you may also encounter two different sets of numbers. One set is from the Centers for Disease Control, and the other is from the Guttmacher Institute—the “independent research arm” of Planned Parenthood Federation of America. The State Health Departments of California, New Hampshire, Alaska, West Virginia and Oklahoma do not report data on abortion.

### Planned Parenthood's income breakdown for the 2018-2019 fiscal year

- PP non-government clinic income: \$369.6 million
- PP donations revenue: \$591.3 million
- PP government grants and reimbursements: \$616.8 million
- Total profit: \$110.5 million  
Total income: \$1.63 billion

### Non-Hispanic Black Abortions by PP

According to the CDC 38% of abortions are done on non-Hispanic Black mothers.

### U.S. women who obtained abortions in 2016 (According to Centers for Disease Control)

- White: 35%
- Black: 38%
- Hispanic: 18.8%      Other: 8.2%
